(91.60%)

Experience

Branding Catalyst(November 2019 - Current)

I am currently working as a Backend Developer for an ongoing project. I have been learning and implementing Django in the company's project.

Projects

- **PharmaQuick(Ongoing)**
An android application that tries to serve the delivery of medicines to users with a main aim to minimize the delay in the delivery.
- **Suraksha**
Suraksha is an application developed to get help during emergency situations.
My role in the project was to find the live location of the victim and find and alert the nearby hospitals and the victim's emergency contacts. The application made use of Google Places API to fetch the location of the user.

- **FitHub**

An android application that keeps the record of users health. The authenticated users can keep a check their physical activity pattern.

- **Sabziwala**

A web based Angular application that connects the local vendors of a particular location on a common platform and let's allow the users to place orders. The backend of the application is maintained at Google's Firebase.

- **StockManager**

A database management android application that is used to help the local shopkeepers to manage their stock data.

- **Library Manager**

A simple terminal based for library database management system.
